# TIPS

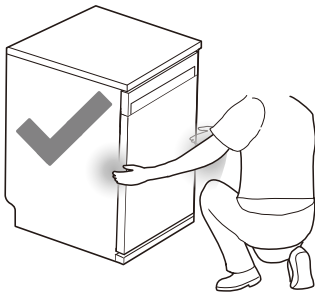

To protect the appearance of the dishwasher, please do not transport the dishwasher over long distances without packaging. Do not push the front door hard, it may cause damage to the dishwasher.

## NOTE!

While transporting, avoid contacting the door with your knee.

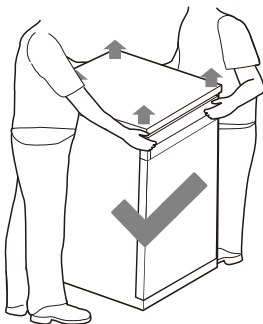

---

## NOTE!

To install the dishwasher into the cabinet, it is recommended to push the dishwasher by holding both sides of the door.

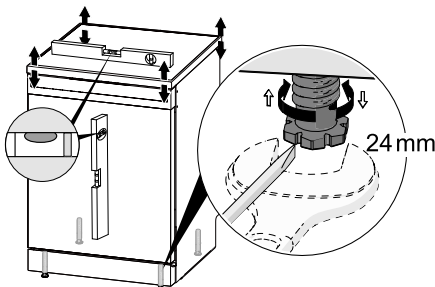

---

## NOTE!

To move the dishwasher, it is recommended to lift and carry the dishwasher by holding both sides of the worktop with two people.

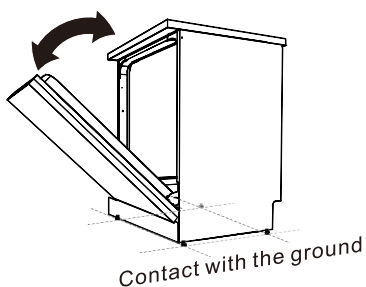

---

## NOTE!

Ensure that the area where the dishwasher will be installed is firm and stable. Adjust the dishwasher's height using the four feet so that it is level. Make sure that all four legs are in contact with the floor and are stable.

---

## NOTE!

Check that the door can open freely and that there is no friction or interference when closing it. If there is any issue, please adjust the feet again to level the dishwasher properly.
